CLASS DESCRIPTION:
This semester, we'll learn the research behind new learning technologies. We'll learn about the software designers and education experts that design and build them. We'll learn how to design activities so that children learn while they play and create with these new technologies, and we'll learn how teachers and parents can use them effectively. You will learn by designing with new technologies; and by engaging with learning sciences research on how and why these activities contribute to learning.

GR3

Design of Emerging Technologies for Education

This is a project-based course. You will explore emerging technologies, such as augmented reality, virtual reality, games, and physical computing tools. You will also learn about the design thinking process and apply it to the design of emerging technologies to improve education based on your own interests. No programming skills are required.

Class will meet in Peabody 307D.

This course is a semester-long thought experiment examining current and historical controversies in the field of Curriculum and Instruction (C&I). The main focus questions of this course are: What should be taught? How should it be taught? Who benefits from what is being taught? Who benefits from how it's being taught? What should we do about it? Many assume that the curriculum is apolitical and generally benign and that students arrive in schools to receive curriculum. Many controversies emerge in and around American schools each year. This course focuses on a few of those in an effort to deepen our understanding of the controversy and allow us as a class community to move towards creative possible solutions. Some of the controversies this course will examine are the role of race in school curriculum and pedagogy, issues of disciplinary areas (e.g. evolution, climate change in science, reading wars, math wars, civic education) how schools can best be structured for learning, the possibilities of schools as sites of resistance, amongst others.

Causal Inference in Education and Educational Policy

This applied methods seminar considers methods and issues related to causal inference in educational and educational policy research. Students will be introduced to and read exemplary studies utilizing several widely-used research designs, including random control trials, regression discontinuity, difference-in-difference, instrumental variables, and propensity score weighting and matching models. By by developing proposals for causal evaluations in their own research settings and conducting preliminary analyses in Stata, students will learn how to apply causal research designs to their own work.

ENVR/PHNU 423-01S (for residential students), Industrial Medicine and Toxicology (3 credits) is considered a graduate level course and is required for most students in the Occupational Safety and Health Education and Research Center (occupational medicine, occupational health nursing, occupational exposure science, safety and ergonomics, and occupational epidemiology). Other students interested in this course should have some background knowledge in one of these disciplines. This knowledge is essential during discussion of the case studies. Permission of the instructor is required for non-OSHERC students. To verify your preparation for this class or other questions please contact Susan Randolph at susan.randolph@unc.edu.

GR1

This is a graduate level course. Advanced undergraduates will be admitted to the course only with permission of the instructor (jjwest@email.unc.edu) Students are expected to master relevant concepts from Earth sciences, chemistry, physics, engineering, economics, and political science; to explain the relevance of these concepts for our present understanding of human-caused climate change and for the viability of proposed solutions. One undergraduate course in chemistry and physics, competence in math required, and an open mind.

Enrollment is limited to graduate students and upper level undergraduates who have core knowledge in chemistry, biology, epidemiology and statistics. This core knowledge would be satisfied by undergraduate or entry level graduate courses in chemistry though organic chemistry, biochemistry, microbiology or cell biology and epidemiology. Core knowledge in risk assessment is also recommended. Undergrads should request faculty approval for admission to class. Contact Dr. Bartram. His email: jbartram@email.unc.edu

This special topics 1 credit elective seminar examines the impact and potential of mobile health interventions and apps for health behavior change. The overall course objective is to understand state of the science and future potential to leverage mobile phones and wearable technologies in innovative and powerful behavior change interventions to improve health. The course considers adaptation of eHealth interventions for mobile delivery, unique opportunities with mHealth, data collection via mobile devices and sensors, and using the data collected to deliver precise, health messages and behavior change techniques. We will consider the growing evidence for mHealth in public health across a range of behaviors and health problems. The course is a mixture of lecture and discussion, with guest lecturers bringing real world expertise and experience in mHealth interventions.

This intermediate-level course is the equivalent of the third semester of college Spanish. Students will hone their listening and speaking skills in class primarily through role-playing activities and class discussion. Activities center on an original film set in a health clinic in rural North Carolina.

This advanced-level course reviews the grammar of the third and fourth semester of college Spanish. Students should have taken through the third semester or equivalent. Students will hone their listening and speaking skills in class primarily through role-playing activities and class discussion. Activities center on an original film set in a health clinic in rural North Carolina.

This year-long integrated seminar and practice experience will provide graduate students in Dentistry, Medicine, Nursing, Public Health and Social Work with the opportunity to apply best practices in refugee health and mental health in a real-world setting. After an initial orientation to refugee resettlement and refugee health needs, students will work in interdisciplinary teams to provide health and mental health systems access, case management, and health promotion education to refugees resettled in the Triangle. In seminar, students will define learning goals in collaboration with instructors who will support their ongoing engagement with refugees. (1.5 credit hours)
