Prerequisite, MATH 761. Elliptic equation methods (finite differences, elements, integral equations); hyperbolic conservation law methods (Lax-Friedrich, characteristics, entropy condition, shock tracking/capturing); spectral, pseudo-spectral methods; particle methods, fast summation, fast multipole/vortex methods.

Prerequisites, MATH 661, 662, 668, and 669. Current models in science and technology: topics ranging from material science applications (e.g., flow of polymers and LCPs); geophysical applications (e.g., ocean circulation, quasi-geostrophic models, atmospheric vortices).

Students, we are, as of 3 November 2015, moving the time of this class from TR 2-3:15 to TR 12:30-1:45. This due to conflicts with our other engineering classes.
Open to all undergraduate, graduate, and professional students. 1 Credit hour. Undergraduates register for ENVR 475 and take the class Pass/Fail. Graduate & Professional students register for ENVR 775 and take the class for a grade.

This special topics 1 credit elective seminar examines the impact and potential of mobile health interventions and apps for health behavior change. The overall course objective is to understand state of the science and future potential to leverage mobile phones and wearable technologies in innovative and powerful behavior change interventions to improve health. The course considers adaptation of eHealth interventions for mobile delivery, unique opportunities with mHealth, data collection via mobile devices and sensors, and using the data collected to deliver precise, health messages and behavior change techniques. We will consider the growing evidence for mHealth in public health across a range of behaviors and health problems. The course is a mixture of lecture and discussion, with guest lecturers bringing real world expertise and experience in mHealth interventions.
