Sports Ventures
This course will be held off-campus, at 1789 Venture Lab on Franklin Street.
This course will be held off-campus, at 1789 Venture Lab on Franklin Street.

The newly-emerging field presents many opportunities. General sports are dominated by oligarchs -NFL, NBA, MLB, NCAA, NHL, MLS - where the cost of entry is hundreds of millions of dollars.

In this course, we will explore Sports Verticals with high growth and lower barriers to entry. These include eSports, analytics, fantasy/betting, youth sports, fitness and health technology and enhanced fan experience. Students will be organized into teams and deep dive into these areas and present findings and a written report and summary presentation. Afterwards, we will develop a sports startup with a presentation & website.

Prerequisite: ECON 325 or PLCY 327.

The course is designed to advance analytical skills in the field of applied labor economics. The course covers empirical models of labor supply, human capital, earnings, income inequality, informality, and the current COVID-19 crisis. Students will learn how researchers evaluate policies affecting labor markets, including tax and welfare reforms, education programs, minimum wage and labor regulation, and COVID-19-related policies. The course mostly focuses on the U.S. labor market. Students will improve programming skills in Stata and use real-world survey data in writing a research project.

### ENEC 201H.143 | Introduction to Environment and Society
MWF, 10:10 am - 11:00 am; Recitation: M, 3:35 pm - 4:25 pm OR M, 3:35 pm - 4:25 pm. Instructor(s): Greg Gangi. Enrollment = 24.

This course will explore changing human-environmental relations from a variety of social, geographical, and historical settings. While some lectures do include material from the natural sciences this is a social science class. The class cuts across a large number of disciplines in a manner that is integrative rather than segregating lessons from different academic disciplines into separate lectures. The focus of this course is in the first half of the class to give students familiarity with how humans and human organizations deal with issues of sustainability. The second half of the semester will explore some critical issues like population, food security, climate change, urban planning and transitioning to a low carbon economy. This part of the course will not only give student information important background information about the problems but also highlight possible solutions.

In addition, to weekly class lectures, students will attend a one-hour recitation session to enjoy small-group discussion and to explore related topics of

This semester-long course, Carolina Sustainability Consulting, will provide undergraduate students the opportunity to put theory into practice by working with clients on projects with an environmental benefit. Working on strategically significant projects, students will put into practice lessons learned in the foundational courses they have obtained throughout their time at UNC and will acquire leadership skills valued in the marketplace such as change management, team work, identifying and overcoming obstacles, and developing buy-in. With a foundation in the scientific method, this course will demand that students solve a problem posed by a client by proposing hypotheses and by conducting literature reviews, primary research, and examining applicable case studies. Students will collect data and evaluate and report on results, making relevant and implementable recommendations. This project-based learning experience will be supplemented with lectures and guest speakers so that students acquire project- and career-relevant skills.

EURO 239H.001 | Introduction to European Government | W, 2:30 pm - 5:00 pm. Instructor(s): Niklaus Steiner. Enrollment = 4.

This course focuses on key political features that are widely and varyingly used in European democracies, such as multi-party systems, parliaments, and proportional representation. It also focuses on key issues that are causing much debate in Europe today, including migration, nationalism, citizenship and populism. An important element of the class is to explore the interaction between these features and issues, how they developed historically especially since 1945, and what might lie ahead for them and for Europe. This class encourages students from a wide range of backgrounds, experiences and perspectives to enroll because it benefits significantly from such diversity. No prior knowledge or experience is needed; instead, students need to be ready to dig...
deeply into the complicated issues raised in the materials and in our discussions of them.

CROSSTLISTED W/ POLI 239H.

DESCRIPTION:
This seminar examines the ways that politics, especially contests over territory, are part of our day-to-day life. We will explore a range of cases, from immigration policy and rhetoric in the US, to popular representations of geopolitics in film, to the politics of family planning in India. How do questions of love, friendship, family and youth identity tie into the international and national political stories that we see on the news? What does national identity have to do with our individual sense of self? We will also explore alternative ways that international politics have been studied, as feminist geopolitics or anti-geopolitics and questions of citizenship. Work for the seminar will involve original research on intersections of international politics and students' daily life, as well as exploring representations of geopolitical issues in the media, film and fiction.

REGISTRATION PROCEDURES:
In mid-June, FY students entering their second term in residence in fall 2021 will be able to enroll in FYS when their registration session opens. This

GEOG 457H.001 | Rural Latin America: Agriculture, Environment, and Natural Resources

TR, 11:00 am - 12:15 pm. Instructor(s): Gabriela Valdivia. Enrollment = 24.

Global demand for primary commodities and energy resources (hydrocarbons, hydropower, minerals, agriculture) drives the expansion of extractive frontiers across Latin America. Meanwhile, more environmental defenders were killed in the region last year than anywhere else in the world, and thousands of forcibly displaced peoples are in search of asylum. How is the current expansion of resource frontiers entangled with rural wellbeing and human rights in Latin
America? And how are the inequities generated by capitalist expansion expressed and experienced, physically, emotionally, and epistemologically? This seminar-style, research-intensive course examines these questions, with a focus on environmental justice and wellbeing and their relation to current resource extraction trends. The course offers students the space for developing an indepth look at extractive histories, political ecology and economy, and decolonial thought in Latin America, and builds on select cases to craft students¿ own inquiry of contemporary environmental injustices in the region.

GEOL 072H.001 | Field Geology of Eastern California
TR, 2:00 pm - 3:15 pm. Instructor(s): Drew Coleman. Enrollment = 20.

Have you ever wanted to stand on a volcano, see a glacier, trace out an earthquake fault, or see the Earth's oldest living things? This seminar is designed around a one-week field trip to eastern California, where students will study geologic features including active volcanoes, earthquake-producing faults, and evidence for recent glaciation and extreme climate change. Before the field trip (which will take place the week of Fall Break and be based at a research station near Bishop, California), the class will meet twice a week to learn basic geologic principles and to work on developing field research topics. During the field trip students will work on field exercises (e.g. mapping, measuring, and describing an active fault; observing and recording glacial features) and collect data for the research projects. After the field trip, students will obtain laboratory data from samples collected during the trip and test research hypotheses using field and laboratory data. Grading will be based on presentation of group research projects, and on a variety of small projects during the trip (notebook descriptions, mapping projects, etc.). Students may be required to pay some of the costs of the trip (a maximum of about

HIST 177H.001 | Early Modern Jewish History
TR, 2:00 pm - 3:15 pm. Instructor(s): . Enrollment = 24.

This seminar examines how and why the twentieth century¿s rival political ideologies and systems constructed welfare states for their citizens. Our readings and discussions focus on: how charitable organizations and states disciplined and cared for ¿the poor¿; the role of the two world wars and Great Depression in vastly increasing state activity, like the US New Deal; and the Cold War and the social welfare consensus in the West since the 1940s. We then study the undermining of this consensus by ¿neo-liberal¿ arguments and governments since the 1970s, and conclude with the current debate about the welfare state in Europe and the US. Our goal is to understand and differentiate between and within different systems, distinguishing between (neo)-liberalism, fascism, Christian democracy, social democracy/democratic socialism, and communism. The readings will focus on ideas, political movements, and state programs.

There will be no Friday lecture during weeks that recitations are held. Please email Rachael Clark (rclark8@email.unc.edu) with your PID to be enrolled in this recitation section.
History 398-001: Seeing the Past

The value that we attach to seeing something for ourselves, and then being able to describe what we have seen to others, is central to our cultural interaction. Seeing is the privileged form of sensory perception and consequently a common metaphor for understanding itself: ¿I see what you mean,¿ we say, or ¿My view on this has changed.¿ In the criminal legal process, great weight is attached to eyewitness testimony, whereas convictions based only on hearsay are rightly considered unsound. But eyewitnesses can also be fallible or mendacious: there are many notorious cases of legal convictions that were based on seemingly compelling eyewitness evidence but were subsequently proved to be miscarriages of justice. Eyewitness is also a key criterion for how historians evaluate their primary sources and arrange them in hierarchies of importance: in the history books and articles that you have read, you will doubtless have come across numerous comments to the effect that such-and-such a source is reliable because its author was present at the events recorded in it, while another source is of lesser significance because it is second hand.

History 398-002: Nazi Germany

This 398 will deal with Nazi Germany on the basis of primary documents and images, provided by the German Historical Institute in Washington, DC. This approach will give students a chance to get beyond the popular myths about the Third Reich by examining primary information on the Nazi movement, the racial dictatorship, the Holocaust and the Second World War. The participants of the seminar will be able to pick a topic according to their own interests and present their findings orally as well as in written form.
HIST 398 sections are restricted to History majors until two weeks into the enrollment period. At that time the restrictions will be removed and all students, regardless of major, will be able to enroll if there are seats available.

Students in "My Hometown" will select a research topic related to a town or region where they or their family has spent considerable time or identify as a place of origin. Essay themes and chronologies will vary widely, but all student projects will be intimately linked through this concept of "My Hometown." This course is designed to teach students how to think, research, and write like Historians. By completing a 20-25 page essay based on original research, students will develop the capacity to pose historical questions, engage historical literature, conduct research, construct arguments, analyze a variety of sources, and compose prose better than they ever have before.

HIST 398 sections are restricted to History majors until two weeks into the enrollment period. At that time the restrictions will be removed and all students, regardless of major, will be able to enroll if there are seats available.

HNRS 390.001 | Indigenous Spirituality in Modern Sinophone Literature

TR, 2:00 pm 3:15 pm. Instructor(s): Robin Visser. Enrollment: 24.

This course examines spiritual motifs in modern Sinophone literature (in English translation) by Indigenous, ethnic minority writers in China and Taiwan. We will read fiction, essays, and poetry by Indigenous Taiwanese, Tibetan, Mongol, Uyghur, Kazakh, Hui, Yi, and Wa writers. These works express spiritual principles from a wide variety of beliefs and cosmologies, including Tibetan and Mongolian Buddhism, Islam, Shamanism, Animism, and Christianity. Rapidly changing relations between humans and their environments due to climate change and green governance policies mean that communities which once flourished in coastal regions as fisher people, in grasslands as mobile nomads, in mountainous regions as foragers, are often resettled into state-owned pastures, farms, towns, and cities. As forced assimilation threatens native languages and cultural heritage, many Indigenous writers function as priests of culture, providing spiritual inspiration to their readers by lyrically evoking powers beyond the human.

We will consider current challenges facing, and sometimes created, by the criminal justice system. We will look at criminal justice policies and practices in North Carolina and the U.S. generally and explore their effectiveness and impact, including their impact on people accused of a crime. Each class or sequence of classes will examine a different set of issues. Do poor people have equal access to justice? Is policing nondiscriminatory? How should we treat people who have mental health problems and commit crimes? How well can people resume their lives after their involvement with the criminal justice system? We will explore these topics through a combination of readings, class discussions, guest lectures and, logistics permitting, site visits. The course will culminate in student-led presentations on topics of the students choosing.

LING 101H.001 | Introduction to Language
This course provides an introduction to the field of linguistics, which can be defined as the scientific study of language. Throughout the semester, we will examine a number of subfields which make up the core of contemporary linguistic research. These include syntax (sentence structure), semantics (meaning), pragmatics (interrelationship between syntax, semantics, and conversational interaction), morphology (word formation), phonetics and phonology (speech sounds and sound systems), historical linguistics (language change), sociolinguistics (language variation and the social factors that promote or inhibit such variation), language acquisition (the development of language in children), and language and the mind (the relationship between our linguistic abilities and knowledge and the rest of our cognition).

Very important: Honors students who intend to register for a Fall 2022 Honors course, should do so during Wave 1 or Wave 2. When open enrollment begins on April 25, Honors course registration will be suspended in order to reserve all remaining seats for incoming first-year Honors students. Continuing students will not regain registration access for Honors courses until August 8. For more information, please visit https://honorscarolina.unc.edu/academics/courses/#register

MATH 062H.001 | Combinatorics
Instructor(s): Ivan Cherednik. Enrollment - 20.
A leading expert in modern Combinatorics wants to share his vision of the subject with the students. The seminar is a perfect background for future specialists in mathematics, physics, computer science, biology, economics, for those who are curious what statistical physics is about, what is cryptography, and how stock market works, and for everyone who likes mathematics.

The course will be organized around the following topics:
1) Puzzles: dimer covering, magic squares, 36 officers
2) Combinations: from coin tossing to dice and poker
3) Fibonacci numbers: rabbits, population growth, etc.

MATH 231H.01F | Calculus of Functions of One Variable I
TR, 11:00 am - 12:15 pm; Recitation: W, 2:30 pm - 3:30 pm. Instructor(s): Xuqiang Qin. Enrollment = 35.
Math 231 is designed to provide a detailed introduction to the fundamental ideas of calculus. It does not assume any prior calculus knowledge, but the student is expected to be proficient working with functions and their graphs as well as manipulating variable expressions and solving equations using algebra.
This is the Honors section of Math 231. It offers a more demanding and deeper treatment than the regular sections as well as more involved applications. There will be more emphasis on understanding theory than in other sections, and students will be expected to understand and reproduce proofs of theorems and formulas. In addition, this section will cover extra topics, including the epsilon-delta definition of limit. Applications will be more involved and will sometimes involve real data. Homework will be more challenging, with more emphasis on creative problem solving and less emphasis on drill. Students will be expected to complete a final project.

Very important: Honors students who intend to register for a Fall 2022 Honors course, should do so during Wave 1 or Wave 2. When open enrollment begins on April 25, Honors course registration will be suspended in order to reserve all remaining seats for incoming first-year honors students. Continuing students will NOT regain registration access for Honors courses until August 8. For more information, please visit https://honorscarolina.unc.edu/academics/courses/#register

MATH 381H.001 | Discrete Math
MWF, 1:25 pm - 2:15 pm. Instructor(s): Emily Burkhead. Enrollment = 35. This course serves as a transition from computational to more theoretical mathematics, designed to provide you with the fundamental skills necessary for success in situations that require you to read, write, and reason precisely when working with mathematics. Special emphasis is given to improving your fluency in the use of mathematical vocabulary and notation when writing and critiquing mathematical proofs. Topics are from the foundations of mathematics: logic and proof techniques, set theory, relations and functions, counting methods, and basic number theory. In many ways, this will be the first "abstract" math course in your academic career. Although we will explore specific, concrete examples whenever possible, this course requires you to hone your ability to analyze and articulate the logical essence of the problems being studied. In other words, you will be expected to learn how to communicate coherently and persuasively using the language and the grammar of mathematics.  PREREQUISITE: MATH 232 OR 283.

MATH 383H.001 | First Course Differential Equations

MWF, 1:25 pm - 2:15 pm. Instructor(s): Jian Wang. Enrollment = 35. The scientific method is arguably the single most important achievement of the modern era. Together with its technological implications, in the last four centuries it has shaped the world both physically and culturally, and continues to do so, like no other element in the history of mankind. The overall aim of the course is to learn the basic elements of the method through a combination of rigorous mathematical training, simple physical experiments, and
elementary mathematical modeling. The focus will be on ordinary differential equations, which can arguably be considered the "birthplace" of the method. In class laboratory experiments will be presented about once per week. Students will be expected to collect data from the experiments, and apply differential equation models to attempt to predict the observed phenomena. Results will be reported in the Final Lab Report. Course material (including videos from experiments will either be posted at our \{bf sakai site, MATH383H.001.SP20\}, or on a dropbox site if the files are too large for the sakai site.

Special functions, natural generalizations of the elementary functions, have been studied for centuries. The greatest mathematicians, among them Euler, Gauss, Legendre, Riemann, and Ramanujan, have laid the foundations for this beautiful and useful area of mathematics. For instance, Euler found the gamma function, which extends the factorial. The Bessel functions and Legendre polynomials play the role in three dimensions similar to the role of sine and
This course presents an overview of special functions, focusing primarily on hypergeometric functions, including Bessel functions and classical orthogonal polynomials. We will discuss how special functions arise from several areas of mathematics and mathematical physics. We will begin with a treatment of the gamma and beta functions, which are essential for understanding hypergeometric functions. Later we will discuss Bessel functions, orthogonal polynomials, the Selberg integral and its applications, spherical harmonics, q-series.

**Combined Section ID:** 0852 (musc/phys51.001) - PHYS 51 (#9450)

**Description:**
This seminar is for students who are interested in how music is made, how sound is produced in instruments, and how those sounds have been used in music making from ancient times to the present day. Students will study the basics of physics and music: wave motion, resonance, the perception of sound, scales, harmony, and music theory. Students who have never studied physics or music theory are welcome to enroll; there are no prerequisites. We will conduct four laboratory exercises (called etudes) in which students will work in small groups to investigate the acoustics of string, woodwind and brass instruments. Keyboards and percussion will also be considered, and students can pursue their areas of special interest in a research paper. The final project for each student will be a public performance of an original musical composition for an ensemble of instruments that the students have constructed themselves out of found objects. This class is taught in person and does not accommodate remote learners.

Students may also register for this course under PHYS 51.001.

In this course we consider the relationship between two concepts, music and politics, broadly, in search of ways in which they elucidate each other as well as resist pairing. The class provides an overview of the major theoretical issues the pairing raises as well as diverse case studies that underscore the range of historical and geographical contexts in which professional musicians, activists, politicians, and civilians have engaged these concerns.

PHIL 155H.001 | Truth and Proof: Introduction to Mathematical Logic
Deductive logic, our subject, is the study of one type or species of good argument. We will use formal tools to more precisely characterize and investigate...
that species, in which the conclusion of an argument follows from certain premises simply in virtue of the form of the various statements involved. We will progressively uncover and study several distinct aspects of form that are relevant to such patterns, starting with what is called truth-functional logic and moving on to quantificational logic. One concern throughout the course will be whether and how we can rigorously prove that a conclusion follows (or doesn't follow) from a group of premises.

Assessment will be via frequent problem sets, which we will prepare for by using significant class time to work together on sample problems. The required textbook is Deductive Logic by Warren Goldfarb (Hackett Publishing).

- **Time:** 14:00 - 15:15
- **Description:**
  - This seminar is for students who are interested in how music is made, how sound is produced in instruments, and how those sounds have been used in music making from ancient times to the present day. Students will study the basics of physics and music: wave motion, resonance, the perception of sound, scales, harmony, and music theory. Students who have never studied physics or music theory are welcome to enroll; there are no prerequisites. We will conduct four laboratory exercises (called etudes) in which students will work in small groups to investigate the acoustics of string, woodwind and brass instruments. Keyboards and percussion will also be considered, and students can pursue their areas of special interest in a research paper. The final project for each student will be a public performance of an original musical composition for an ensemble of instruments that the students have constructed themselves out of found objects. This class is taught in person and does not accommodate remote learners.
