Our online course is hosted through Canvas. I will teach 2 lecture sections this semester: section 001 - lectures will be online, asynchronous; section 002 - lectures will be online asynchronous AND we will meet 1x per week for optional discussion in person. Discussion work is ungraded, optional, and interactive (gain additional practice working on problems together or discussing topics introduced during the recorded videos...and I'll get to address your questions face-to-face). Location may vary, in the past we've met in Carrington Hall or Genome Sciences Building. For both sections: all exams, quizzes and assignments remain online.

I will teach 2 lab sections this semester. Register for either lab section, they are equivalent. Both lab sections will be taught online, asynchronous. The lab is required; you will receive 1 combined grade for lab + lecture (same as this semester).

Our online course is hosted through Canvas. I will teach 2 lecture sections this semester: section 001 - lectures will be online, asynchronous; section 002 - lectures will be online asynchronous AND we will meet 1x per week for optional discussion in person. Discussion work is ungraded, optional, and interactive (gain additional practice working on problems together or discussing topics introduced during the recorded videos...and I'll get to address your questions face-to-face). Location may vary, in the past we've met in Carrington Hall or Genome Sciences Building. For both sections: all exams, quizzes and assignments remain online.

I will teach 2 lab sections this semester. Register for either lab section, they are equivalent. Both lab sections will be taught online, asynchronous. The lab is required; you will receive 1 combined grade for lab + lecture (same as this semester).

**BIOS 500H** is an introductory course in probability and statistical inference designed for the background and needs of BSPH Biostatistics students.

Topics include survey sampling, descriptive statistics, design of experiments, correlation, probability, confidence intervals, tests of hypotheses, 2-way tables, chi-square distribution, power, ANOVA, non-parametric tests, and linear regression. A small class size will allow opportunity for more in-depth treatment of biostatistics topics.

In addition to traditional introductory statistical concepts, students explore current controversies, ethical questions, and common errors in the medical literature through a variety of readings and a project. Students will be able to produce straightforward statistical graphs and conduct commonly used analyses using SAS software. Emphasis will be placed on understanding the underlying mathematical concepts in biostatistics, developing SAS programming skills and interpreting results clearly for a non-statistical audience in writing.

During early registration, only BIOS students will be allowed to register. If you are a NON-BIOS student interested in this course, please add yourself to the waitlist in Connect Carolina - you do not need to contact the instructor. Because this is a required course for some incoming biostatistics students who register in the summer, we will not have any information about the availability of seats until just before classes start. We may not be able to take students off this waitlist until mid-August, even though there appear to be open seats in Connect Carolina. We enroll students with this priority: biostatistics students, students in the SPH, students outside the SPH, so the waitlist priority may not reflect the order that students are removed off the waitlist. While we do our best to accommodate interested students, in past semesters, students with lower priority were not able to enroll in the course.

*Undergraduates can only be on one waitlist at a time.*

<td>DESCRIPTION: This course is an entry into an undergraduate learning community organized by the Gillings School of Global Public Health, Department of Environmental Science and Engineering. The ECUIPP Lab (Environmentally-Engaged Communities and Undergraduate students Investigating for Public health Protection) is a creative community of students, faculty members and practice partners. Students in ENVR 89-001 will become members of the Environment-ECUIPP Lab. Over the course of the semester they will design and conduct research that addresses a pressing environmental health issue in a local community. Students will work with the local community partner to develop a research question and use the resources of the ECUIPP Lab and the Department of Environmental Sciences and</td>

This course meets Monday evenings (5:00pm - 7:00pm) at the NC Biotechnology Center and is coupled with a Zoom discussion session Thursday mornings (8:00am - 9:15 am). All students attend Monday evening lectures and should register for 2 credits. Students register for 3 credits if they plan to attend Thursday morning discussions. Under special circumstances, and with permission, students may take this class for 1 credit with reduced assignments.

Course Description: This course provides an introduction to the field of computational toxicology and exposure science. Students will be equipped to understand databases and tools that can more efficiently evaluate chemical-biological and chemical-disease relationships. Students will be expected to use excel and R/Rstudio, and run script as either a gentle ‘welcome’ to the coding environment, or advanced script to further their baseline knowledge. The course is designed for students in public health, toxicology, exposure science, chemistry, epidemiology, and related disciplines.
Prerequisites: Basic knowledge of environmental science, chemistry, and biology is required, familiarity with Excel and basic data software, and students are required to have some level of experience with R/RStudio. Students must be willing to run R/RStudio and other example coding packages, with start-up script provided for, and build upon their baseline skillset in computational analyses. We are welcoming to both wet and dry lab students, and will accommodate varying levels of familiarity with coding.
